1. Containers (C4 level 2)

Exchange Student Guide, CS5013 — Mikhail Novikov, Abdirakhim Ismailov. One Spring Boot process, a database, a search index on disk, a directory of uploads.

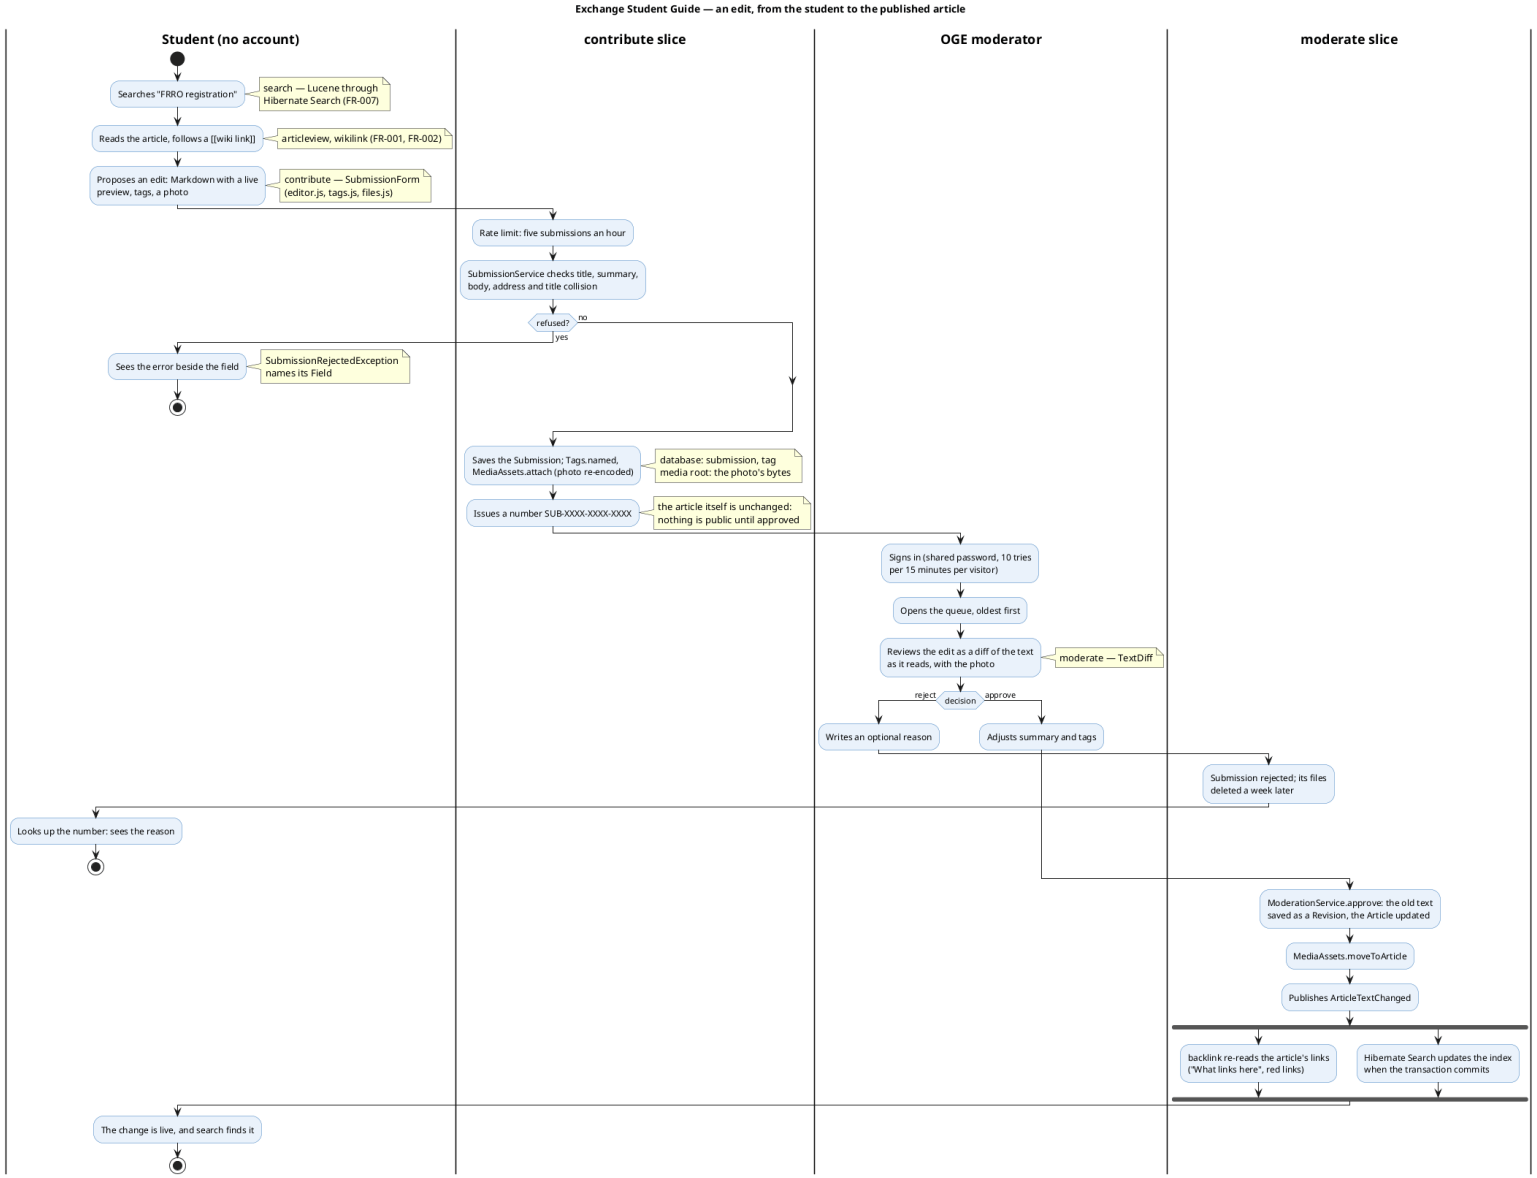

2. Thirteen slices, grouped by who they serve

Each slice is a package; one may use another's published types only, enforced by `ModularityTest` and ArchUnit.

3. The main flow: an edit, from the student to the published article

Each step names the class that does it.

4. Every arrow between slices, with what crosses it (C4 level 3)

The same arrows Spring Modulith draws from the imports (`c4-component-actual`).
